

OPEN SHELVING

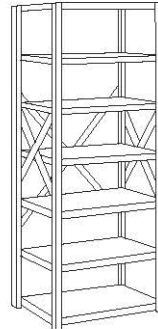

The most basic and economical shelving design for general purpose use is the open type shelving. The open backs and sides are stabilized by the sway braces. Units include 2 box posts, 2 angle posts, 2 sets of side sway braces, 1 set of back sway braces, 5 shelves and hardware. 6-, 7-, and 8-shelf configurations are also available upon request.

CLOSED TYPE SHELVING

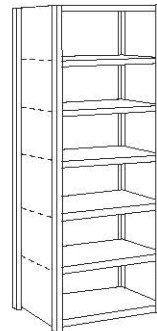

Closed type shelving units improve stability and provide protection to stored items because they are covered on three sides with steel panels. Units contain 2 box posts, 2 angle posts, 2 side panels, 1 back panel, 5 shelves and hardware. 6-, 7-, and 8-shelf configurations are also available upon request.
